Emre Doğan Çelik

Endpoint & Infrastructure Engineer
Ankara, Turkey | emredogancelik@gmail.com | + 90 541 812 40 86

PROFILE

Endpoint & Infrastructure Engineer with experience in large-scale enterprise and banking environments. Specialized in managing and automating endpoint ecosystems supporting 20,000+ devices, including ATM and mission-critical banking systems.

Strong background in Microsoft infrastructure technologies including Active Directory, DNS, DHCP, Exchange, virtualization platforms, and secure endpoint operations. Experienced in SCCM architecture, compliance baselines, BitLocker lifecycle management, and PowerShell/C# automation.

Proven ability to design scalable, secure, and maintainable infrastructure solutions aligned with regulatory requirements and operational efficiency goals.

PROFESSIONAL EXPERIENCE

Infra Endpoint Engineer – IBTech (Banking Environment) | August 2025 – Present

• Responsible for centralized management of 20,000+ banking endpoints, including ATM and branch kiosk systems, leveraging enterprise SCCM infrastructure for OS deployment, patch management, compliance enforcement, and secure configuration governance.
• Designed and maintained endpoint compliance baselines and secure configuration standards aligned with banking regulations and audit requirements (e.g., BDDK, BTK).
• Developed scalable PowerShell and C# automation solutions to reduce manual operational workload and standardize endpoint management processes.
• Managed BitLocker encryption lifecycle, endpoint security configurations, and vulnerability remediation initiatives across mission-critical environments.
• Built custom SQL queries and Power BI dashboards to provide operational visibility and compliance reporting for IT and security stakeholders.
• Integrated endpoint identity and monitoring workflows with Cisco ISE and Nexthink to enhance device posture validation and user experience monitoring.
• Improved incident response efficiency and reduced repetitive operational tasks through automation within a 20,000+ device enterprise ecosystem.

System Engineer Consultant – Arksoft Technologies | July 2023 – August 2025

• Provided infrastructure consultancy services for 50+ public and private sector customers, delivering scalable and secure enterprise solutions.
• Designed and implemented Active Directory, Exchange, ADFS, RDS, DNS, and DHCP infrastructures tailored to customer requirements.
• Developed PowerShell and .NET-based automation solutions to improve infrastructure management efficiency and reduce operational overhead.

• Actively involved in customer-facing technical design, troubleshooting, and solution optimization processes.
• Delivered solutions across multiple industries, adapting enterprise architectures to diverse regulatory and operational requirements.

EDUCATION & CERTIFICATION

B.Sc. Computer Engineering – GPA: 3.65 / 4.00
Microsoft Azure Developer Associate (AZ-204)
